4 منهجية التقرير

البيانات من ملف junit.xml الناتج عن `phpunit --log-junit` — تشغيل حقيقي كامل. «تغطية الوحدات» تُحسب بتحليل كل ملف اختبار لاستخراج أصناف `\App` التي يستوردها/يستخدمها، ثم مقارنتها بإجمالي أصناف مجلد `/app`. لا تعكس تغطية الأسطر داخل كل دالة (يتطلب `Xdebug/PCOV` غير المتاحين هنا)، لكنها تُبين بصدق أي وحدات المشروع ممسوسة باختبار.
